

# EXTERNAL VULNERABILITY SCANNING

Achieve a greater level of assurance  
around your Internet-facing hosts.

Six Degrees' External Vulnerability Scanning helps you to achieve a greater level of assurance around your Internet-facing hosts via a regular, repeatable streamlined process. Automated vulnerability scanning is backed up with manual reviews carried out by a certified Penetration Tester.

The scans are monitored while running, and the results are placed into a monthly or quarterly report for you to review the results and recommended remediation steps as well as the Penetration Tester's own executive summary of the results.

Should results of interest be identified, optional monthly meetings with the Penetration Testing team at Six Degrees can be requested to provide further advice or context around the vulnerability scan's findings.

Our External Vulnerability Scanning service is provided by some of the most highly experienced and accredited Penetration Testers in the industry. We are members of the National Cyber Security Centre (NCSC) CHECK scheme, and our team members and leaders are certified under CREST and the Cyber Scheme.

“...results are placed  
into a monthly or  
quarterly report for you  
to review the results  
and recommended  
remediation steps...”

## External Vulnerability Scanning Benefits

Achieve a greater level of assurance around your Internet-facing hosts.

Receive clear, easy to understand reports that include remediation advice.

Work with a cyber security partner who can support you through mitigating actions.
