

INTELLIGENCE-LED SECURITY

Master today's complex threat landscape and protect your business with intelligence-led security services.

Is your business feeling exposure? Have you experienced a recent security breach or incident? Are you unsure where to start to improve your security posture? Six Degrees will enable you to enhance your cyber security posture through intelligence-led security services that protect your business from emerging cyber threats.

Business Challenges

Struggling to meet customer and regulatory body expectations for your business to have robust cyber resilience in place.

Data breaches and business-impacting security events such as ransomware attacks are increasing.

Concerned about your business' security posture but daunted by the prospect of where to prioritise time, resources, and investments.

Introducing Intelligence-Led Security

Six Degrees offers an intelligence-led approach to security that delivers insight to make confident security decisions, provides direction for your business towards a proportionate security posture, and proactively defends and responds against cyber threats in an evolving threat landscape.

Rather than being concerned with where and when the next attack or service impacting event will happen, partner with Microsoft Intelligence Security Association (MISA) member Six Degrees to provide peace of mind and instil confidence through a wealth of cross industry, security vetted expertise and a comprehensive portfolio of cyber services.

Six Degrees delivers clarity and certainty of your current security posture through comprehensive testing and a prioritised plan to mitigate risk. We provide the resources, expertise, and market leading cyber security services to deliver proportionate cyber security controls, ensuring you have the peace of mind that comes with having a protected business that maintains credibility and trust with your internal and external customers.

Why Intelligence-Led Security?

What It Does	Why This Matters	What It Means
Allows your business the time and resources to focus on your core offerings.	Constantly feeling like you are playing catch up to hackers trying to steal your data or cause a business impacting downtime event is draining. It does not allow for creative and innovative thinking that drives business value.	Gaining assuredness and confidence in a decisive and proportionate risk mitigation plan to improve your security posture allows you the focus to move onto business growth initiatives.
Delivers comprehensive protection for your business.	Your business has a duty of care to its people and its customers. A lack of protection can lead to financial and reputational damage.	Achieving and evidencing a robust cyber security posture demonstrates and provides credibility in your business' commitment to its people and its customers.
Added business value through security.	Credibility and trust are core tenets of an attractive brand. An improved security posture can enhance a brand and add value to a business.	Improving your security posture and achieving recognised security standards makes it easier for customers to do business with you.
Gain clarity in an evolving threat landscape.	Feeling one step ahead of potential business impacting security events can increase confidence and minimise downtime.	Reduce the chance of your business experiencing downtime, and reduce expenditure tied to downtime and potential regulatory fines.
