PHISHING AND SCENARIO TESTING

Test your organisation's ability to cope with specific phishing attacks and understand how your security teams react to attack scenarios.

CNS

at Six Degrees

Six Degrees' Phishing and Scenario Testing services test your organisation's susceptibility and reaction to targeted campaigns and attack scenarios chosen by you. Our services help you understand your organisation's maturity and response to particular attack scenarios or campaigns, and our testers will employ tactics and techniques used by hackers to assess your organisation's response capability.

Whether you are looking to understand more about specific risks, understand if your cyber security training is effective, or want to understand how susceptible you are to a phishing campaign, our Phishing and Scenario Testing services deliver critical insights by taking a real-world approach to infiltrating your organisation, following the sophisticated methods hackers use every day.

Once areas of weakness are identified, our expert Penetration Testers provide guidance around how they found an exploit and

how each weakness can be mitigated – delivering guidance on how you can enhance your organisation's cyber security posture and response capability.

Our Phishing and Scenario Testing services are provided by some of the most highly experienced and accredited Penetration Testers in the industry. We are members of the National Cyber Security Centre (NCSC) CHECK scheme, and our team members and leaders are certified under CREST and the Cyber Scheme.

Phishing and Scenario Testing Types

Phishing

Six Degrees' Phishing service aims to test an organisation's staff and their reactions to receiving crafted phishing emails of various levels of sophistication. The goal of the testing is to provide an overview of the effectiveness of your organisation's technical infrastructure in preventing malicious emails, as well as testing employees' reactions to phishing emails and the effectiveness of any training programs in place.
Scenario Testing

Six Degrees' Scenario Testing service allows you to have a greater depth of interaction with our Security Testing Team to build a set of customised attack scenarios that are specific to your organisation. These scenarios are then subjected to malicious activities such as penetration testing, malware creation/ deployment and phishing techniques, among others, all with the purpose of identifying and assessing how your organisation performs within the confines of a given scenario.

Secure, Integrated Cloud Services

Phishing and Scenario Testing Benefits

Understand and reduce the level of risk your organisation is exposed to. ✓

Receive clear, easy to understand reports that include remediation advice. ✓

Work with a cyber security partner who can support you through mitigating actions. ✓

Why Choose Six Degrees for Your Phishing and Scenario Testing

20				
Over 20 years of cyber security heritage and experience.	SC cleared, UK-based Penetration Testers.	CHECK, CREST and Cyber Scheme certified.	Tailored testing that suits your organisational requirements.	Access to complementary testing, consultancy, and managed security services.
