

PROACTIVELY DEFEND AND RESPOND

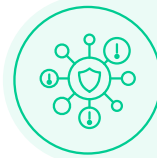

CNS
at Six Degrees

Rest easy knowing our experts are here to proactively defend and respond to cyber incidents throughout your environment, 24x7.

Is your business concerned about mitigating cyber-attacks when faced with a continually changing and evolving threat landscape? Six Degrees will enable you to enhance your cyber security posture by proactively defending and responding to threats.

Business Challenges

Reactive defence is not enough in a dynamic threat environment. Hackers are sophisticated, capable, and motivated to cause maximum pain and disruption, and they can pivot extremely quickly to leverage newfound vulnerabilities opportunistically.

Threat intelligence, once considered a luxury, is now almost a necessity for high profile businesses.

Introducing Proactively Detect and Respond

Six Degrees' cyber security managed services enable cyber leaders to proactively defend and respond against emerging threats and extend their security capabilities to counter potential business-impacting security events proactively.

Rather than feeling like you are always catching up to keep on top of the intentions of bad actors, you can gain surety of direction by partnering with Microsoft Intelligent Security Association (MISA) member Six Degrees. We provide confidence and clarity in your security posture through UK-centric Managed Detection and Response and Threat Intelligence services.

Proactively Defend and Respond

Secure, Integrated Cloud Services

Why Proactively Defend and Respond?

What It Does	Why This Matters	What It Means
UK-centric management, detection, and response to endpoint threats.	For businesses with a heavy presence in the UK, local expertise will provide local knowledge and local vetting to be able to service a higher level of data classification which exemplifies the calibre and seriousness with which we take our service provision and customer data.	Top level local expertise, rapid response, and a high level of security clearance.
Gain peace of mind, reassurance, and confidence in your security posture.	Constantly feeling like you are playing catch up to individuals and organisations trying to steal your data, or cause a business impacting downtime event, is draining. It does not allow for creative and innovative thinking that could drive business value.	Assuredness and confidence in a decisive and proportionate risk mitigation plan to improve your security posture, allowing for focus to move onto business growth initiatives.
Achieve continuous monitoring and intelligence by partnering to extend your business' security capability.	In-house resources typically struggle to provide continual service and protection out of hours. This is when many attacks will occur as the response time will be poorer. Time to respond and time to identify attacks are critical to minimising the impact of the attack.	Six Degrees' cyber managed services reduce time to identify and respond to threats, 24x7.
Gain the knowledge and technology capability to get ahead of threats by accessing professionals that understand and can interpret them.	Proactive rather than reactive threat mitigation will significantly reduce or remove the impact of a potential attack.	Expertise and technology that will mitigate and potentially prevent potential attacks, reducing the impact.
