

ASSURED, OPTIMISED CLOUD

Gain confidence in your cloud direction and achieve accelerated time to value through assured and optimised cloud services.

Is your business lacking confidence in its ability to manage its cloud estate, meet delivery deadlines, and keep within budgets due to resource constraints?

Business Challenges

Cloud is not meeting expectations with the pain of excessive run costs, increased overheads, and a struggle to retain or attract resources.

Missing market opportunities while experiencing a backlog of work leading to missed delivery dates.

Confidence is not sufficient for IT to commit to delivering innovation while supporting critical business services.

Introducing Assured, Optimised Cloud

Six Degrees can unlock these challenges and put your business on a pathway to success. We deliver assured, optimised cloud services that empower you to take control of resource optimisation, security, and cost management.

We will also modernise and maximise your existing investments to support innovation, enable you to meet deadlines within appropriate financial parameters, and accelerate time to value while increasing your IT team's ability to focus on delivering business value.

Unleash your potential with our comprehensive professional and managed services, expertise, and toolsets validated through our Microsoft Azure Expert MSP status. Accelerate development deliverables and regain confidence as an IT leader, making decisive commitments to support business growth.

Secure, Integrated Cloud Services

Why Assured, Optimised Cloud?

What It Does	Why This Matters	What It Means
Higher ROI in cloud.	Economic conditions mean all IT investment needs to deliver a material ROI to justify future investment.	Turn cloud into a strategically beneficial tool, and gain advocacy from your CFO that will allow future use cases to be explored propagating further benefits.
Building on your in-house capability.	There is a skills shortage and a constant battle to retain specialist cloud talent. In-house staff must be enabled to use their business knowledge and acumen to help with internal communication and process navigation.	Gain peace of mind, assuredness, and confidence that in-house teams can be augmented with Six Degrees' experts in a collaborative working partnership.
Time to focus on adding business value.	Typically, businesses' IT teams spend most of their time supporting the upkeep of the business, rather than innovating and delivering competitive advantage.	By leveraging Six Degrees' cloud services business-as-usual tasks can be outsourced, freeing up your in-house staff to spend more time on activities that deliver business value.
Accelerated time to market.	Competitive opportunities and first mover advantage scenarios demand rapid action. Bureaucracy, antiquated rigid provisioning and sign-off processes, and an increasing development backlog inhibit a business from capitalising on such opportunities.	By leveraging Six Degrees' Flexible Engineering service, your business can clear its backlogs and leverage specific cloud skills to accelerate development cycles and capture new market opportunities.
Empowered internal users and high-value talent retention.	Enabling users to flourish by arming them with the IT services they need and engaging in-house resources with expertise to work alongside them empowers and satisfies employees, leading to increased productivity and longer tenure.	Your business will benefit from enhanced productivity, and greater retention of high calibre users and IT team staff.
Do more with less.	Economic circumstances mean IT organisations need to be more efficient with their infrastructures, software and services, and internal resources.	By leveraging Six Degrees' Well Architected Review service, your business can gain visibility of where it can make efficiency gains and be most effective in its use of cloud.
Increase confidence in delivering to deadlines and understanding costs.	Growth businesses are making data-driven decisions to leverage IT resources with confidence. This is predicated on a proven track record of delivering the necessary capability to support business initiatives and costs being understood.	Assertive and decisive board level decision making improves the ability of your business to pivot and take on higher risk opportunities.
Simplified ways of working.	Leveraging simple and consistent processes reduces risk, effort, bureaucracy, and complexity, thus reducing cost and speeding up delivery.	Achieve reduced costs and accelerated delivery by leveraging Six Degrees to introduce standard operating models or recommendations for process refinements.

Our Credentials

To learn more about how you can gain confidence in your cloud direction and achieve accelerated time to value through our assured, optimised cloud services, please contact sales@6dg.co.uk or call 0800 012 8060.
