

PUBLIC CLOUD MANAGED SERVICES

Optimised Azure cloud management to support governance, growth, and innovation.

Six Degrees' Public Cloud Managed Services provide a comprehensive portfolio of **governance, management and reporting** aligned to fluctuating requirements across your Microsoft Azure environment to deliver the appropriate level of coverage, efficiently and securely.

Our fully UK onshore delivered Public Cloud Managed Services are ideal for new or existing Azure environments where organisations seek to:

Gain control over cloud costs and spend

Adhere to architecture best practices

Resolve performance, security, reliability, or operational challenges

Ensure service availability and resolution

Address in house resourcing constraints

Three Service Tiers Tailored to Your Needs

Our Public Cloud Managed Services are available in three tiers that can be modelled across your Azure estate based on your Azure subscriptions.

Foundation tier delivers ongoing financial governance and control through FinOps reporting and partner-led Azure premier support.

Governance tier adds improved operational, performance, security and reliability cloud governance through monthly reporting and reviews alongside access to a Technical Service Manager to offer proactive remediation recommendations.

Manage and Govern tier is enhanced further with first, second and third-line support for your Azure environment, standard Operating Systems, and Microsoft SQL.

Managed Service Tier Comparison

Capability/Tiers	Foundation	Governance	Manage and Govern
Microsoft Platform Support (24x7) logging with Microsoft	Y	Y	Y
Service Review Meeting	Y (Quarterly)	Y (Monthly)	Y (Monthly)
FinOps Monthly Report	Y	Y	Y
CloudOps Monthly Report		Y	Y
SecOps Monthly Report		Y	Y
FinOps, SecOps and CloudOps Remediate	Additional Option	Additional Option	Additional Option
Managed Standard OS and SQL			Y
Managed Standard IaaS and PaaS			Y
Managed Standard AD			Y
Managed Standard Firewall			Y
Managed Standard Backup (Backup as a Service)			Y
DR Management			Y
Managed Standard Landing Zones			Y
Six Degrees Support Level 1, 2 and 3 Support (24x7)			Y
Advanced Services (OS, SQL Server, Firewall, AD, DRaaS)			Additional Option

Support Governance, Growth, and Innovation

What It Does	Why This Matters	What This Means
FinOps reporting to identify areas of wasted spend and recommendations for remediation.	Lack of confidence or concern in spiralling cloud costs can inhibit the usage of cloud to drive growth and innovation.	On average 32% of cloud spend is considered wasted. Get control to eliminate wastage, be able to predict spend, and charge back appropriately.
SecOps reporting to identify areas of risk and recommendations for remediation.	Exposure to security threats or breaches of compliance can be extremely damaging for organisations and their customers.	Gain confidence and credibility internally and externally that you meet the security and compliance needs of your customers.
CloudOps reporting to identify inefficiencies related to performance, operations and reliability.	Poorly architected Azure environments inhibit the ability to leverage the true capability of the platform and can lead to frustration, downstream delays and issues, and lack of competitiveness.	Well architected cloud environments can drive growth and innovation and provide a stable platform to build on.
Technical Service Manager to offer proactive reporting and recommendations.	Interpreting information and prioritising remediation efforts are crucial to ensuring a cloud environment doesn't stagnate or cause downstream challenges due to inaction.	Have confidence and peace of mind that Six Degrees will be your eyes and ears on your Azure environment to spot opportunities for efficiency gains and environment improvements.
Manage and Govern Tier first/second/third-line support.	Standard operational support matters are taken off your in-house team's responsibilities.	Your in-house team can be freed up to work on projects driving the organisation forward. Any attrition of staff in your organisation does not lead to degradation of service as Six Degrees will handle it.

Six Degrees' Public Cloud Managed Services can be taken alongside our Flexible Engineering service to complement and support your cloud-native workloads, alongside your traditional workloads that have been moved to cloud.

Professional Services Cloud Assessments are available to:

- Determine the health of your current Azure environment comprehensively, or specifically related to FinOps or SecOps with individual assessments.
- Assess candidacy and readiness for migration to cloud.
- Prove the viability of Azure for a specific workload through a proof-of-concept engagement.

Our Credentials

- AMMP Partner
- Direct Bill CSP
- JumpStart Partner
- Operator Connect
- Microsoft Azure Connectivity Peering Partner
