

# UNLEASH YOUR POTENTIAL

**Genuine digital empowerment for you and your business. Access dedicated, named teams who will own and manage transformational programmes that will allow you to unleash your potential.**

Is your business experiencing a backlog of development activities and a skills shortage that is impeding your ability to drive continuous improvement and development?

## Business Challenges

There is a critical IT skills shortage that is leading to your business being outpriced or unable to attract or retain top cloud talent.

You are experiencing challenges ensuring service excellence is delivered while concurrently driving innovation and continuous improvement and continuous development (CI/CD).

A backlog of development activities has aggregated, leading to deadlines being missed and the business being unable to embrace opportunities.

An undue amount of focus is placed on ensuring a high standard of operation for 'business as usual' rather than delivering business value.

## Introducing Unleash Your Potential

Six Degrees' Flexible Engineering services can unleash your potential by providing named, highly experienced cloud and DevOps resources to augment or lead your DevOps team and drive accelerated completion of your CI/CD pipeline committed deliverables.

Rather than compounding the impact of missed deadlines, be the enabler of business innovation and growth by partnering with Six Degrees and leverage our full portfolio of professional services experts and resources to give you confidence to enhance business agility and kickstart transformation efforts.

Six Degrees can enhance your cloud engineering capability through augmenting and embedding additional cloud engineering resources on a monthly committed basis for 12 months. Don't worry about recruiting and retaining top talent: we can mitigate the impact and accelerate development efforts with a broad range of capable, UK-based cloud experts to drive or support the completion of your committed deliverables.

## Unleash Your Potential

**Flexible  
Engineering**

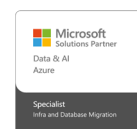

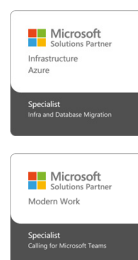

**Professional  
Services**

**Secure, Integrated Cloud Services**

## Why Unleash Your Potential?

What It Does	Why This Matters	What This Means
Trusting expertise.	Business moves at the 'speed of trust'. Relationships forged with capable, customer-centric experts who prove their credibility early will accelerate outcomes.	Access to trusted advisors and practical and efficient cloud engineers.
Evergreen.	Resources can be leveraged for a variety of activities, opening doors for potential development projects to get greenlighted and delivered – enhancing IT's ability to support business innovation and growth initiatives.	Broad capability that can be leveraged, unlocking long desired shelved development activities.
Agile-aligned processes.	Working to an operating model the current team is accustomed to or, where not fit for purpose or absent, a common best practice framework that can be introduced ensuring clear expectations, accountability, and an efficient development process is adhered to.	Six Degrees can inherit the current development operating model, propose the most appropriate model if absent, and take on ownership and leadership where relevant.
Cost governance and control.	A known cost model and the governance around it are crucial for development activities that can easily sprawl without such operating parameters.	Scrum master and cloud development frameworks can be leveraged to bring in governance and control.
Improved secure score.	Developmental activities around security can be supported, which will inherently improve the security posture of your business.	Improved security posture as judged in the eyes of Microsoft.
Increase speed to market.	Momentum and the consistent delivery of developmental programme commitments are crucial to building confidence in the team and the business' ability to capitalise on opportunities and leverage business growth initiatives supported by IT.	Provision of resources necessary to accelerate the completion of backlog or in-flight development activities.
Enable customer differentiation.	Development activities can inherently deliver bespoke or innovative capabilities that differentiate you from your competitors. Just having a reputation and brand associated with introducing new services and products that deliver customer value on a regular basis can lead to further customer satisfaction and adoption as a perceived and proven innovator.	Six Degrees can propose or support developmental efforts that will lead to customer differentiation.
Simplified ways of working.	Circumstances change. It is important to be able to work with a partner who will be flexible in the provision of engineering resources to allow resources to be increased if needed.	Boost hours and out of hours provisions for engineering resource within the contractual terms.

### Our Credentials
