

# WINDOWS 11 UPGRADE READINESS

Get Windows 11-ready before Microsoft stops supporting Windows 10 in October 2025.

Microsoft is ending support for Windows 10 in October 2025. You need to be prepared to make the upgrade to Windows 11 as soon as possible to ensure your endpoints and users stay protected and secure.

Windows 11 Upgrade Readiness is a one-time professional service which passes all the hard work of preparing your Intune environment and packaging applications for Windows 11 to us, leaving you with only the final step of deploying the build to your Windows 11 compatible endpoints when you are ready.

## Windows 11 Upgrade Readiness Service Benefits

### Be prepared.

Be ready to deploy Windows 11 before the Windows 10 end of support date in October 2025.

### Security assurance.

Intune configured to our baseline, which is based on three industry recognised benchmarks for security.

### Cost savings.

Your third-party applications will be packaged and tested in a Windows 11 environment for peace of mind that they will work after you upgrade.

### Identify upgrade risks.

Identify non-compatible hardware in your environment so you can plan to replace it in time.

# Windows 11 Upgrade Readiness Service Features

## Microsoft 365 licence review

We will review your Microsoft 365 licences to ensure you have the required Windows 11, Intune, and Defender for Endpoint entitlements for each user.

## Intune configuration

We will deploy our Intune baseline configuration to your Microsoft 365 tenant and agree with you any existing policies which may need to be enforced above our baseline.

## Active Directory GPO review and migration to Intune where appropriate

We will complete an audit of any existing Active Directory GPOs in your environment, provide recommendations based on our findings and, with your agreement, manually replicate approved, appropriate policies into Microsoft Intune.

## Application packaging for Windows 11 and Intune

We will package any application you provide us with media, licence keys, and configuration details which you require to be deployed to users in your Windows 11 build.

## Windows 365 testing environment

We will provision one Windows 365 Cloud PC, for the duration of this professional services engagement, to be used for user acceptance testing of the Windows 11 build and packaged applications.

## Hardware review and Windows 11 compatibility report

We will provide you with a report on which of your existing endpoints are compatible with Windows 11, along with which will need to be upgraded and why based on information you provide us about your current hardware.

## Endpoint reimaging guide

We will provide you with a guide which explains how you can reimage your physical endpoints to deploy the Windows 11 build and enrol them into Intune Management.

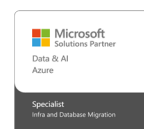

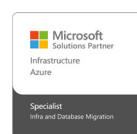

## Windows 11 get started guide

We will provide you with a Windows 11 end-user get started guide in a digital format.

## Our Credentials
