

FINOPS HIGH LEVEL REPORT AND WORKSHOP

Gain cloud financial insights as the first step to cloud cost control, governance, and optimisation. **Beyond Cloud.**

Provide Six Degrees' cloud experts with visibility of your Microsoft Azure subscriptions for the purposes of capturing, analysing, and reporting on your Azure cloud financials. **To date, the FinOps High Level Report and Workshop has found potential remediation activities that could lead to savings of between 18 and 40% of monthly Azure spend for customers, if acted upon.**

Our FinOps High Level Report and Workshop is ideal for Azure environments where:

Cloud costs are a concern or uncontrolled

Budgets are being stretched with consistent overspend

There is difficulty tracking spend to appropriate business units or functions

The First Step to Controlling Your Azure Cloud

66% of cloud users are reporting 'somewhat higher' or 'significantly higher' cloud spend than they had planned, while on average cloud users consider 32% of their cloud spend to be wasted spend*.

Moving to the cloud is just the start of your journey: gaining insights into where your budget is being spent is a crucial step towards gaining control of your costs and moving to a truly cost optimised and governed Azure estate.

Having reviewed your Azure environment, Six Degrees' cloud experts will provide high level guidance on where savings can be made during a workshop and offer the opportunity for further engagement to validate findings and enact the recommendations through our Professional Services teams.

Insights that Deliver Clarity and Direction

If you are an Azure user and have not recently reviewed your Azure financials or have low confidence that your environment is cost optimised, our FinOps High Level Report and Workshop will provide you with valuable insights and recommendations.

High level view of the financial health of your Azure environment

Clarity over where your cloud spend is allocated

Insight into potential for savings and efficiency gains

Proactive ongoing management and cost optimisation of your Azure environment will be available as a managed service.

FinOps High Level Report and Workshop Deliverables

What It Does	Why This Matters	What This Means
Right sizing.	Inappropriately sized VMs can lead to inefficient use of resources.	Bring efficiency and savings through cost optimisation.
Idle, orphaned resources.	Isolated resources burn budget.	Identify idle, orphaned resources and retire.
Markups discount.	Find opportunities for discounts based on committed resources over term, such as reserved instances.	Significantly reduce your costs.
Drilled down cost reports.	Greater visibility leads to more intelligent decision making.	See where your money is going at a granular level.
Insight into potential savings from remediation activities.	Expert advice on potential remediation activities that can be further validated and acted upon by Professional Services.	A clear path forward to cost optimisation.

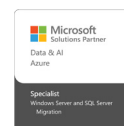

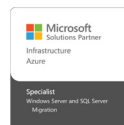

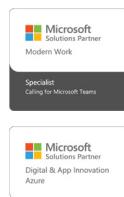

The FinOps High Level Report and Workshop is a free of charge engagement for qualifying organisations. A full FinOps Assessment is available as part of our Well Architected Review Professional Services portfolio.
